

FOR IMMEDIATE RELEASE:

**GENERAL SERVICES ADMINISTRATION AWARDS
HIGHLY ADAPTIVE CYBERSECURITY SERVICES SPECIAL ITEM NUMBERS
TO KINGFISHER SYSTEMS, INC.**

FALLS CHURCH VA, May 22, 2018. The General Services Administration (GSA) has awarded all four Highly Adaptive Cybersecurity Services (HACS) Special Item Numbers (SINs) on the GSA Information Technology Schedule 70 to Kingfisher Systems, Inc. The award provides Federal, state, and local Government agencies access to key, pre-vetted support services to expand their capacity to test high-priority IT systems, rapidly address potential vulnerabilities, and stop adversaries before they impact networks.

Kingfisher Systems, Inc.'s Chief Executive Officer, Roy L Reed, Jr. stated, "The addition of the HACS SINs is another great step in demonstrating our full spectrum of cybersecurity capabilities to our customers and further differentiates Kingfisher as a leader in providing cybersecurity services."

The HACS SINs feature high quality cybersecurity vendors offering the following services as identified by GSA:

- "132-45A Penetration Testing is security testing in which assessors mimic real-world attacks to identify methods for circumventing the security features of an application, system, or network.
- 132-45B Incident Response services help organizations impacted by a Cybersecurity compromise determine the extent of the incident, remove the adversary from their systems, and restore their networks to a more secure state.
- 132-45C Cyber Hunt activities are responses to crisis or urgent situations within the pertinent domain to mitigate immediate and potential threats. Cyber Hunt activities start with the premise that threat actors known to target some organizations in a specific industry, or specific

systems, are likely to also target other organizations in the same industry or with the same systems.

- 132-45D Risk and Vulnerability Assessment conduct assessments of threats and vulnerabilities, determines deviations from acceptable configurations, enterprise or local policy, assesses the level of risk, and develops and/or recommends appropriate mitigation countermeasures in operational and non-operational situations. This SIN offers the following services:
 - Network Mapping
 - Vulnerability Scanning
 - Phishing Assessment
 - Wireless Assessment
 - Web Application Assessment
 - Operating System Security Assessment (OSSA)
 - Database Assessment
 - Penetration Testing”
